figurine fragment. has firecore, located closer to the interior surface, towards exterior. turns a brownish orange (this being the pure paste color). Finish has been worn on design surface. Some areas have remained smooth. Figure has been modelled by hand, with incisions used to accentuate certain features. What these features are, is uncertain. upper right hand corner of fragment is thickest part of fragment. At this point as well, design surface protrudes. Below this, fragment thins out to .9cm, bottom edge then curves outward. Incision is ~~this~~ thin, lined, most likely made from single point instrument.
